Software Product Description

PRODUCT NAME: Emacs ™, Version 6.0   **SPD 42.65.02**

DESCRIPTION

Emacs provides an advanced editing system enabling multi-windowing and integration with the application development environment. In addition, a large number of automatic support facilities for the programmer are included. The Emacs product is developed by UniPress Software, and sold under Digital Equipment Corporation's terms and conditions.

Emacs is a powerful and advanced full-screen editor. It can operate on several in-core buffers in parallel. Each of these buffers can contain the contents of a source file as well as the result of an execution run. In order to look into these buffers, Emacs operates with windows. Buffers can be reviewed and changed through these windows.

A large number of support functions are available to assist programmers, including:

- undoing the last command or sequence of commands

- incremental search and replace functions

- automatic back-up

- in-line expansion of previously defined abbreviations

- on-line Help

Emacs operates in an environment that enables the user to start jobs without leaving Emacs and to collect the output of such jobs into a buffer. The user can then examine and manipulate the contents of that buffer through a window. Since Emacs is mainly used for program development, special integration towards MAKE (the UNIX® product generation tool) is present. This enables the programmer (for example) to run a compilation (as part of MAKE) and to collect the diagnostics into a buffer.

HARDWARE REQUIREMENTS

Processor and/or hardware configurations as specified in the System Support Addendum (SSA 42.65.02-x).

SOFTWARE REQUIREMENTS

- SCO™ UNIX System V™/386

- Base System Management

  For easy configuration of terminals and printers included in the DECadvantage platform, Base System Management is required. Moreover, the updates on the SCO kernel included in Base System Management are required.

  For consistent and integrated support by Emacs of all terminals, printers, and keyboards included in the DECadvantage platform, the Peripheral Support Package, as part of Base System Management, is required.

Refer to the System Support Addendum (SSA 42.65.02-x) for availability and required versions of prerequisite /optional software.

System Support Addendum

HARDWARE REQUIREMENTS

Processors Supported:

- applicationDEC 433MP
- applicationDEC 400xP
- DECpc 400ST
- DECpc 400MTE series

SOFTWARE REQUIREMENTS

- SCO™ UNIX® System V™/386 Release 3.2 Version 4
- Base System Management Version 6.0

  For easy configuration of terminals and printers included in the DECadvantage platform, Base System Management is required. Moreover, the updates on the SCO kernel included in Base System Management are required.

  For consistent and integrated support by Emacs of all terminals, printers and keyboards included in the DECadvantage platform, the Peripheral Support Package, being part of Base System Management, is required.

Unsupported:

- SCO ODT

GROWTH CONSIDERATIONS

The minimum hardware/software requirements for any future version of this product may be different from the requirements for the current version.

DISTRIBUTION MEDIA

The software is distributed on high-density, 3.5-inch diskette.
