Software Product Description

PRODUCT NAME: DECprint Supervisor for Xerox Printers for OpenVMS Alpha, SPD 54.74.01
Version 2.0

DESCRIPTION

DECprint Supervisor for Xerox Printers (DSX) for OpenVMS Alpha is a layered software product that runs on OpenVMS Alpha systems and provides access to Xerox Laser Printing Systems (LPS). DSX provides the interface between Xerox printers and the OpenVMS printing and queuing system. DSX uses the OpenVMS PRINT commands, with which OpenVMS customers are familiar.

DSX software provides access to the advanced functions and high-speed printing that Xerox LPS printers are known for. The DSX software is well suited for printing:

- High-speed, high-quality cut sheet documents

- High-quality complex documents with a mix of text, graphics, and images

- One- and two-sided documents on a demand-print basis

- Black or black and highlight color documents

- Insurance policies, benefit summaries, phone bills, credit card bills, invoices, and other high-volume, time-critical print jobs

Supported Data Types

DSX supports four data streams:

- ASCII text

- Line Conditioned Data Stream (LCDS)

- Metacode (in 512-byte blocks)

- Image

You can combine these data streams to produce complex documents for any printing requirement.

In addition to the above supported data types DSX version 2.0 can support other input protocols when optional translators are installed. These translators are called and communicate to the DSX print symbiont through a new Application Program Interface (API). The first translator that is available is for the Postscript language and is available separately from PRISM SOFTWARE 23696 Birtcher St. Lake Forest, California 92630 (714-855-3100).

Printing Resolution

All supported printers print produce extremely high-quality text, graphics, and images at a minimum of 300 x 300 dpi. Two of the printers, the 4635 and DP96, are capable of 300 x 600 dpi and the DP180 is capable of 600 x 2400 dpi. Highlight color provides one additional color (green, blue, red, or others) to add interest and attract the eye to specific information.

Popular User Interface

DSX supports printing of complex pages, forms, and graphics through standard OpenVMS interfaces, such as the PRINT command and the DECwindows Print Widget. In addition, all features accessible through the command line are accessible through the standard OpenVMS print API.

Components

DSX consists of the OpenVMS print symbiont, support software utilities, and interface software for the shared disk interface.

- The print supervisor allows you to print documents and reports efficiently and reliably on Xerox printers connected to the OpenVMS system through a SCSI bus interconnect.

- The Management and Diagnostic utility allows you to manage the LPS print resources and to troubleshoot the host-to-printer interconnect.

- Driver software communicates with the printer through a SCSI channel to a shared disk subsystem.

- Device control modules can provide access to Xerox printer functionality.

- The included Xerox LPS print resources, such as forms and print job libraries, allow you to install and print documents with minimal familiarity with Xerox LPS internals.

The following components help you install and use DSX software:

- Installation procedure

- Installation verification procedure

- Startup procedures

- Example procedures and commands

- On-line help

- Documentation for users, printer operators, and system managers

Features

DSX software supports the following:

- The DCL PRINT command and qualifiers

- Simplex and duplex printing

- Portrait and landscape printing

- Highlight color on printers so equipped

- Page imposition (number up) of up to four page images per sheet

- Offset stacking of print sets

- Forms

- JDLs, JDEs, and DJDEs from the command line or through device control library and the DEFINE/FORM command

- Communication through a shared disk on a dedicated SCSI channel providing high-speed transfer (5 MB per sec) of print jobs to the printer and printing at the rated speed of the Xerox LPS printer

- Downloading of printer resources from the OpenVMS system to the printer using the Management and Diagnostic utility

- Uploading printer resources from the printer to the OpenVMS system using the Management and Diagnostic Utility for the purposes of modifying or backing up the resources.

INSTALLATION

You can install DSX software with vmsinstal. The installation procedure is provided in the DECprint Supervisor for Xerox Printers for OpenVMS Alpha Installation Guide (part number AA-QGEZB-TE).

HARDWARE REQUIREMENTS

The following hardware is required for each printer to be connected:

- A shared disk subsystem. Used as the communication channel between the OpenVMS Alpha system and the Xerox DDI.

- One dedicated SCSI channel adaptor for the OpenVMS Alpha system.

- A SCSI cable between the OpenVMS Alpha system and the disk subsystem.

- A SCSI controller for the Xerox printer.

- A SCSI cable between the disk subsystem and the Xerox printer.

- SCSI extenders (DWZAA) and differential SCSI cables for printers further than 3 meters from the Alpha host.

Processors Supported

DSX requires one of the following processors with a dedicated SCSI channel and one of the supported printers. If additional printers are attached, an additional SCSI channel dedicated to the printer must be added to the system.

DEC 2000 Model 300 Server
DEC 2000 Model 500 Server
DEC 3000 Model 300 Workstation
DEC 3000 Model 300L Workstation

Processor Restrictions

You need a dedicated SCSI channel for each printer attached to the system.

Pick the appropriate SCSI controller from the list below for each printer attached to your system:

- For PCI-based systems, including AlphaStations and AlphaServers:
  KZPAA-AA PCI fast SCSI-2 controller

- For EISA-based systems, including DEC 2000/3000 systems:
  PB2HA-SA EISA based fast SCSI-2 controller

- For turbo channel-based systems, including DEC 3000 systems:
  PMAZC-AA turboChannel fast SCSI-2 controller

- For XMI-based systems, including DEC 7000 and DEC 10000 systems:
  KZMSA-AB XMI fast SCSI-2 controller

You also need to order one of the following for each printer attached to your system:

- BA353-AA Storageworks table-top cabinet

- RZ26L-VA 1.0 GB SCSI-2 disk drive

- BN21H-1E 1.5M SCSI-2 cable

If the Xerox printer is going to be more than 10 feet from the OpenVMS Alpha system, order a SCSI extender. This consists of two signal converters and a cable.

- DWZZB-AA SCSI signal converter (two are needed)

- BN21L-15 15M 68-pin SCSI P cable

Xerox Printers Supported

The following Xerox Docuprint Laser Printing System (LPS) printers are supported:

4250/MRP black and white printer with XDDI software

4850 highlight color printer, release 5.0

4090 black and white printer model 3 with XDDI software

4890 highlight color printer, release 5.0

DP96 black and white printer, release 3.0b

4635 black and white printer, release 3.0a

DP180 black and white printer, release 3.0c

These Xerox printers are high-speed, high-volume printers capable of printing from 50 to 180 pages per minute with volumes up to 2 million pages per month. The 4850 and 4890 are highlight color printers, which print black and one additional color. The printers need to be configured with the Xerox DDI option.

Disk Space Requirements (Block Cluster Size = 1)

DSX for OpenVMS Alpha Systems requires the following amount of free space on the system disk:

Disk space required for installation: 10500 blocks

Disk space required for permanent use: 8700 blocks

The sizes are approximate; actual sizes may vary depending on your system environment, configuration, and software options.

SOFTWARE REQUIREMENTS

For all systems:

OpenVMS Alpha Operating System, V6.1 or later

Optional Software

Distributed Queueing System, (DQS) Version 1.3 for OpenVMS is recommended when the system that DSX is running on is dedicated to driving one or more Xerox printers. This allows networked OpenVMS systems with DQS to transparently send print jobs to the system with DSX installed. See SPD 28.80 for more details.

DEC TCP/IP for OpenVMS Alpha (formerly called UCX) is recommended when systems running DIGITAL UNIX (formerly called OSF/1) need to print to a Xerox printer. TCP/IP runs in the OpenVMS system, receives print jobs from DIGITAL UNIX systems using the "lpd" protocol, and forwards them on to the OpenVMS queueing system. See SPD 46.46.xx for more details.

It is now possible to add input language translators to DSX v2.0. The first translator that is available is for the Postscript language and is available separately from PRISM SOFTWARE 23696 Birtcher St. Lake Forest, California 92630 (714-855-3100). Check with the vendor to determine minimum software requirements since translators are not DIGITAL products and may not be supported on the same version of OpenVMS.

SOFTWARE LICENSING

This software is furnished under the licensing provisions of Digital Equipment Corporation's Standard Terms and Conditions. For more information about DIGITAL'S licensing terms and policies contact your local authorized DIGITAL distributor or reseller or your local DIGITAL sales office.

DSX is licensed on a concurrent use basis. Each concurrent use license allows you to use DSX with one Xerox printer. You need one concurrent use license for each printer being driven by DSX at the same time. Thus if you are driving two Xerox printers from an OpenVMS system, you will need two concurrent use licenses loaded on your system.

DSX licenses are available based on printer speed. There is one set of licenses for the 50ppm printers which are the Docuprint 4250 MRP LPS and the Docuprint 4850 LPS. There is another set of licenses for printers of 92ppm and above. There is an upgrade license available for customers that have purchased a 50ppm license and wish to upgrade to 92ppm or above.

SOFTWARE PRODUCT SERVICES

A variety of service options are available from DIGITAL. For more information contact you distributor, reseller or the local DIGITAL Sales Office.

SOFTWARE WARRANTY

Warranty for this software is provided by DIGITAL with the purchase of a license for the product as defined in the Software Warranty Addendum of this SPD only when the product is used to drive a Xerox printer as listed in this SPD.
