PRODUCT NAME: **SRM Event Logging for Windows NT, Version 5.0**
                 SPD 63.98.00

DESCRIPTION

System Resource Management (SRM) Version 5.0 consists of a set of products providing integrated Systems and Network Management Services in a Financial Business System (FBS) and large business accounts like Insurance and Healthcare industries.

The overall SRM configuration includes a centralized management system which controls branches connected to a Wide Area Network (WAN) based on TCP/IP and SNA communication protocols. In the branches the server and the workstations are interconnected via the LAN.

SRM Version 5.0 products supports Windows NT server and Windows/DOS workstations and ensures effective manageability of complex networked systems. The SRM products are installed in the distributed LAN based branch environment and interworks in a flexible way with various industry standard central management systems such as:

> - POLYCENTER Manager on NetView (PNV) positioned as the central platform for FBS device management and network management.

> - Microsoft's Systems Management Server (SMS) and AssetWORKS to receive configuration information from SRM branch products regarding installed branch hardware and software.

> - IBM NetView program running in the IBM host which receives customer controlled events from FBS devices and PC applications. The IBM NetView operator can also execute remote Windows NT and SRM commands in the branch environment.

The SRM Version 5.0 products are:

> SRM Event Logging for Windows NT

> SRM NT Event MIB for Windows NT

> SRM Device MIB-I for Windows NT

SRM Event Logging for Windows NT Product features:

d i g i t a l ™

This product provides an essential addition to event and device management in mixed Windows/DOS and Windows NT configurations.

SRM Event Logging for Windows NT extends the Windows NT event logging function to Windows/DOS workstations. TFM applications, c-applications and device UPS'es can send information from the Windows/DOS workstation to the NT Event log on the Windows NT server.

In addition to the basic event logging function the product also:

- Enables the retrieval of information about Financial Business Systems (FBS) devices in a Microsoft Systems Management Server (SMS) at a central/primary site. The information includes configuration, status and event information about teller printers and cash note dispensers connected to Windows/DOS workstations in a network.

- Generates management information about FBS devices that you can view and modify via POLYCENTER Manager on NetView. This requires in addition the product SRM Device MIB-I for Windows NT, for more information, see corresponding product description.

- Supports an IBM NetView operator on the IBM host with event information from Windows/DOS workstations that are connected to Windows NT servers.

- Adds the log listing command to the Windows NT environment enabling you to select, sort and view event log records both from within Windows NT and remotely from the IBM NetView command line.

SOFTWARE REQUIREMENTS

For Windows NT branch Server:
- Microsoft Windows NT operating system version 3.5 or later
- TFM runtime package version 3.1.5 or later

For Windows/DOS workstations:
- Microsoft Windows for Workgroups version 3.11 or later
- TFM runtime package version 3.1.5 or later

DISTRIBUTION MEDIA

DSHD 3.5-inch diskettes.

GROWTH CONSIDERATIONS

The minimum hardware/software requirements for any future version of this product may be different from the requirements for the current version.

ORDERING INFORMATION

Software Licenses for client-server part of SRM Event Logging for Windows NT, server part:

Product Name/Version = SRM Event Logging Server Version 1.0:
