Software Product Description

PRODUCT NAME: Spyglass™ Enhanced Mosaic™ Version 2.10 for OpenVMS™   SPD 56.25.00

DESCRIPTION

Spyglass™ Enhanced Mosaic ™Version 2.10 for Open-VMS ™ is Web client technology for accessing the World Wide Web. Enhanced Mosaic is one of the commercial web browsers that runs on OpenVMS and is included with the OpenVMS Internet Product Suite Version 1.2. It is also included with DECwindows ™ Motif ® for OpenVMS. Enhanced Mosaic Version 2.10 offers several important attributes such as user visual experience, secure electronic payment, performance, and globalization.

Improved Visual Experience

Several features are offered to enhance the user's visual experience when viewing content using the browser. This is particularly important to electronic publishers who want users to view and interact with richly formatted multimedia documents. Features of the product employ widely accepted, proposed HTML extensions: tables, centered and right-aligned text and images, text wrapped around images, background colors and bitmaps, and colored text. These presentation features, along with support for AU and AIFF audio files and inline JPEG and GIF images, combine to make interaction with the Web very appealing.

Performance

Smart Maps, a Spyglass innovation, allow users to link to new documents quickly using clickable images without relying on server intervention. And because Smart Maps work locally as well as across the Internet, the user gets the performance benefit of local access. Local disk caching restores recently retrieved documents without opening an Internet connection. Enhanced Mosaic even has the ability to compare the cached documents against the same documents on the Web, providing the

user with the most current information quickly and efficiently.

Enhanced Mosaic's Advanced Display Technology instantaneously displays text and progressively displays images, allowing users to interact with the document even before it is finished downloading.

Globalization

Language barriers on the Internet are significantly reduced with Enhanced Mosaic V2.10. It allows users to display documents in the preferred language of the user through its language negotiation capabilities. Also, through localization features, the browser itself can be displayed in the language of choice and supports 2-byte character sets. French and German are the languages in which the browser can be displayed initially.

Intuitive User Interface

Enhanced Mosaic V2.10 user interface offers the following features:

- Configurable graphical user interface (GUI).

- Advanced toolbar.

- Integrated newsgroups—Sort, read, and post newsgroup messages in fully threaded hierarchical windows.

- FTP file upload—Conveniently drop off files at an FTP server for exchange with others.

- Bookmark facility—Maintain, index, and search a hierarchical list of frequently accessed sites.

- Popup, object-specific context menus.

January 1997

SOFTWARE PREREQUISITES

Spyglass Enhanced Mosaic Version 2.10 for OpenVMS requires:

- OpenVMS Version 6.1 or later

- DECwindows™ Motif® Version 1.2-3 for OpenVMS or later

- DIGITAL TCP/IP Services for OpenVMS Version 3.3 or later or any TCP/IP product for OpenVMS that supports the Berkeley socket interface

HARDWARE REQUIREMENTS

Spyglass Enhanced Mosaic requires an X Window System ™ display. Any X display is supported except a VAX 4000 VLC.
