PRODUCT NAME: **SRM Device MIB-I for Windows NT, Version 5.0**
                                  SPD 63.96.00

DESCRIPTION

System Resource Management (SRM) Version 5.0 consists of a set of products providing integrated Systems and Network Management Services in a Financial Business System (FBS) and large business accounts like Insurance and Healthcare industries.

The overall SRM configuration includes a centralized management system which controls branches connected to a Wide Area Network (WAN) based on TCP/IP and SNA communication protocols. In the branches the server and the workstations are interconnected via the LAN.

SRM Version 5.0 products supports Windows NT server and Windows/DOS workstations and ensures effective manageability of complex networked systems. The SRM products are installed in the distributed LAN based branch environment and interworks in a flexible way with various industry standard central management systems such as:

> - POLYCENTER Manager on NetView (PNV) positioned as the central platform for FBS device management and network management.
>
> - Microsoft's Systems Management Server (SMS) and AssetWORKS to receive configuration information from SRM branch products regarding installed FBS devices.
>
> - IBM NetView program running in the IBM host which receives customer controlled events from FBS devices and PC applications. The IBM NetView operator can also execute remote Windows NT and SRM commands in the branch environment.

The SRM Version 5.0 products are:

> SRM Device MIB-I for Windows NT
>
> SRM Event Logging for Windows NT
>
> SRM NT Event MIB for Windows NT

SRM Device MIB-I for Windows NT Product features:

d i g i t a l ™

This product adds an SNMP agent to the Windows NT branch server, which enables a user of a SNMP management system to view information about FBS devices such as teller printers and teller cash/note dispensers from device information files on Windows NT servers. In addition, the product includes MIB description file and MIB applications for FBS device data presentation in PNV.

This product is an extension of the SRM Event Logging for Windows NT product, which must be installed and running simultaneously on the Windows NT server. The SRM Event logging product will create device information files which forms the input to SRM Device MIB-I SNMP agent.

Device events can also be automatically forwarded to the central SNMP management system via the SNMP trap mechanism included in "SRM NT Event MIB for Windows NT".

SOFTWARE REQUIREMENTS

For Windows NT branch Server:
· Microsoft Windows NT operating system version 3.5 or later.
· TCP/IP and SNMP (version 1) protocols must be installed and configured.
· SRM Event Logging for Windows NT.

DISTRIBUTION MEDIA

DSHD 3.5-inch diskettes.

GROWTH CONSIDERATIONS

The minimum hardware/software requirements for any future version of this product may be different from the requirements for the current version.
