digital

Hardware tailored to your business

A DIGITAL ™ Server for Microsoft ® Site Server Commerce Edition is easy to purchase, set up, and manage. DIGITAL has configured solutions for a variety of platforms and price ranges. All are based on Microsoft Site Server and Windows NT ®. And all include the software and services necessary for success.

You can choose between Intel®- and Alpha-based servers—sized to fit your business—to power your store. DIGITAL Servers are perfect for Internet commerce because they offer high performance and reliability, plus they can handle the increased load as your business grows. DIGITAL Servers integrate easily with your company's current computing environment. Your DIGITAL representative or authorized reseller will work with you to determine the configuration that's right for you.

What is *virtual* Store?

The *virtual* Store™ is a complete, packaged Internet commerce storefront solution from DIGITAL and Microsoft. The components include:
· **Hardware—**DIGITAL Server system, tailored to fit your specific needs.
· **Software—**Microsoft Site Server Commerce Edition and SQL Server database, for creating and managing a storefront on the popular Windows NT operating system.
· **Transaction Processing—**Authorization, authentication, and clearing services, plus Internet-based credit card payment processing software from noted providers such as VeriFone, CyberCash™, and Trintech.
· **Services**—Customized service and support package from DIGITAL, including everything you need to implement your store—from installing software and loading your product database, to testing the order processing procedures.

By choosing *virtual* Store, you capitalize on DIGITAL's relationships with trusted, experienced partners who understand the technology required for conducting business on the Internet.

DIGITAL portfolio of Internet services

Once you are doing business on the Internet, you may want to expand or enhance your operation. At DIGITAL, we're ready to help you with these worldwide services:
· **Internet Security Services**—in addition to firewalls, DIGITAL offers encryption and tunnels to secure your commercial enterprise and protect sensitive data.
· **Internet Service Provisioning**—for ISPs who want to move into next-generation services, such as membership, news, and personalization services.
· **Internet Commerce Integration Services** —to increase your commercial capabilities, such as handling multiple currencies or various tax and shipping models.
· **Infrastructure Services**—to plan, design, and implement a network infrastructure or data center.
· **Internet Operation Management Services** —to plan, stage, and develop commercial applications on a DIGITAL-hosted facility, such as your company's Web site.
