**Reasoning About Programs**

**11. Equational Logic**  
*Robi Malik*

DEPARTMENT OF COMPUTER SCIENCE  
TARI ROROHIKO

**Natural Deduction Rules for Equality**

**=-Introduction (Reflexivity Axiom)**

$$(-\text{intro}) \quad \frac{}{\forall x \ x = x}$$

**=-Elimination (Substitution Principle)**

$$(-\text{elim}) \quad \frac{A \quad t_1 = t_2}{A[t_1/t_2]^k}$$

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 4

**Why Equality?**

superman = clark\_kent

- Natural and concise notation
- Common in mathematical reasoning
- Adds some expressive power to predicate logic

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 2

**Substitutions**

$A[t_1/t_2]^k$  is the result of replacing the  $k$ th occurrence of subterm  $t_1$  in formula  $A$  by  $t_2$ .

$A[t_1/t_2]$  is the result of replacing all occurrences of subterm  $t_1$  in formula  $A$  by  $t_2$ .

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 5

**The Substitution Principle**

superman = clark\_kent

- If Superman and Clark Kent are the same person, then every property of Superman also is a property of Clark Kent.
- Thus, if Superman can fly, then Clark Kent can also fly, etc.

**An Example Proof**

(Let a be an arbitrary object.)	
(Let b be an arbitrary object.)	
1. a = b	assumption
2. $\forall x \ x = x$	=-intro
3. a = a	$\forall$ -elim: 2
4. b = a	=-elim: 3, 1
5. a = b $\rightarrow$ b = a	$\rightarrow$ -intro: 1-4
6. $\forall y \ (a = y \rightarrow y = a)$	$\forall$ -intro: 1-5
7. $\forall x \forall y \ (x = y \rightarrow y = x)$	$\forall$ -intro: 1-6

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 6

### Another Example

	(Let a be an arbitrary object.)	
	(Let b be an arbitrary object.)	
	(Let c be an arbitrary object.)	
1.	$a = b \wedge b = c$	assumption
2.	$a = b$	$\wedge$ -elim-1: 1
3.	$b = c$	$\wedge$ -elim-2: 1
4.	$a = c$	$=$ -elim: 2,3
5.	$a = b \wedge b = c \rightarrow a = c$	$\rightarrow$ -intro: 1-4
6.	$\forall z (a = b \wedge b = z \rightarrow a = z)$	$\forall$ -intro: 1-5
7.	$\forall y \forall z (a = y \wedge y = z \rightarrow a = z)$	$\forall$ -intro: 1-6
8.	$\forall x \forall y \forall z (x = y \wedge y = z \rightarrow x = z)$	$\forall$ -intro: 1-7

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 7

### Equality Trap

*What is wrong with this formalisation?*

- The lion is a mammal.

lion = mammal

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 10

### Properties of Equality

- Reflexivity
 
$$\forall x \ x = x$$
- Symmetry
 
$$\forall x \forall y (x = y \rightarrow y = x)$$
- Transitivity
 
$$\forall x \forall y \forall z (x = y \wedge y = z \rightarrow x = z)$$

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 8

### Expressing Uniqueness

- H.C. is the only prime minister of New Zealand.
 
$$\text{pm}(\text{hc}) \wedge \forall x (\text{pm}(x) \rightarrow x = \text{hc})$$
- There is one and only one prime minister of New Zealand.
 
$$\exists x (\text{pm}(x) \wedge \forall y (\text{pm}(y) \rightarrow x = y))$$

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 11

### Yet Another Example

1.	$a = b$	premise
2.	$p(a)$	assumption
3.	$p(b)$	$=$ -elim: 2,1
4.	$p(a) \rightarrow p(b)$	$\rightarrow$ -intro: 2-3
5.	$p(b)$	assumption
6.	$\forall x \ x = x$	$=$ -intro
7.	$a = a$	$\forall$ -elim: 6
8.	$b = a$	$=$ -elim: 7,1
9.	$p(a)$	$=$ -elim: 5,8
10.	$p(a) \rightarrow p(b)$	$\rightarrow$ -intro: 5-9
11.	$p(a) \leftrightarrow p(b)$	$\leftrightarrow$ -intro: 4,10

### Unique Existence Quantifier

$\exists_1 x \ A(x)$

is often used as a shorthand for

$\exists x (A(x) \wedge \forall y (A(y) \rightarrow x = y))$

© THE UNIVERSITY OF WAIKATO · TE WHARE WANANGA O WAIKATO · COMP340-08B Lecture 11 · Slide 12
